

THE MAIN EVENT

SOUTH KOREA: A tourist hotspot and one of the busiest shopping malls in the city, the fashionable Kangnam-gu district of Seoul is home to the new Club Mania at the Ritz Carlton Hotel – where an impressive sound system has been installed by local contractor, the Soundus Corporation.

Originally The Eden Club in Hang Dae (the clubbing district in northern Seoul), the new club is one of the currently popular 'M2' clubs that is putting on international DJs and filling its dancefloor with the city's fashionable youth.

'With the common agreement of club owners and their clientele, the current trend is for clubs to move from Hong Dae to Kangnam-gu,' explained Daewook 'DJ' Jung, of Soundus.

Soundus Corporation supplied and installed 16 E25 and six MC1250 amplifiers behind the main stage to drive 12 Funktion-One RES5 loudspeakers, which form the main speaker system, with monitor and zone coverage

being provided by eight Funktion-One F221 speakers. In addition to weekend club/DJ nights, this two-storey venue operates as a pub during the week and caters for hotel guest parties at the weekend, as well as holding fashion shows and other exhibitions – all considerations when designing the sound system.

'Once again the unbeatable combination of Funktion-One loudspeakers and MC² Audio amplifiers combine to provide an outstanding audio experience, installed by the real professionals at Soundus,' commented Bill Woods, MC² group sales and marketing director.

'We at Soundus and our client are also very happy with the result of the installation at Club Mania,' added Me Jung. 'The resident engineer has commented on the great sound and reliability of the system.'
